

Center Street Revitalization

Project Description

Knudson, LP prepared a revitalization plan for a 13 block segment of Center Street located in Deer Park, TX. This plan includes historical gateway design, urban streetscape concepts, historical intersection design, and economic design incentives to revitalize the main vehicular corridor into the City of Deer Park. Services included inventory and analysis of existing conditions within the corridor, public engagement with the local community, presentation of design recommendations and alternatives, and identification of funding sources and opportunities. In addition to enhancing the aesthetics of Center Street, the Design Team identified development strategies and incorporated the new Harris County Precinct 2 “Project Stars” initiative to improve the economic vitality of the corridor.
