

Museum Of Fine Arts, Houston Expansion

Project Description

The Museum of Fine Arts Houston (MFAH) plans to construct approximately 200,000 additional square feet of new exhibit space and reconstruct the Glassell School of Art to provide approximately 80,000 square feet for a new building. 500 additional parking spaces will be built in underground parking garages below the two new buildings.

Knudson was responsible for producing, submitting, and recording the subdivision plat with a building line variance. In addition to subdivision platting, Knudson also facilitated the joint referral process with support from the project's civil engineer and surveyor.
