

Phillis Wheatly High School

Project Description

As part of the Houston Independent School District re-build program, Knudson in partnership with ESPA Architecture, Inc. worked on the remodel of this historic Houston high school which was completed in 2007. Knudson's role was to provide overall site planning, landscape architectural services, along with landscape irrigation design. With the creation of a formal campus entry, exterior cafeteria courtyard for faculty and students, and a state of the art track and field area, the renovation to this 39 year old high school has brought back many historical attributes to this newly modernized facility.
